A. Navigation Pages (7)

1. Overview / Command Center

Purpose:
Quick status board for viva demos: KPIs, module tiles, activity log, edge-node panel.
How to use:
Sidebar > Overview. Use jump buttons (Case Builder, Triage, Hospital Hub, Reports).

2. Case Builder

Purpose:
Compose patient context (age, gender, BHU, urgency, notes, network) before triage.
How to use:
Sidebar > Case Builder. Fill fields > Save case / Open triage / Run triage.

3. Dashboard (Triage workspace)

Purpose:
Run inference, view results, workflow strip, overlay, clinician override, XAI summary.
How to use:
Upload scan in sidebar > select modality > Run Triage. Toggle Show Detection Overlay.

4. Hospital Hub

Purpose:
GSM-style alert stream for LHV/doctor review: Agree / Override / Approve.
How to use:
Sidebar > Hospital Hub. Open an alert and choose Agree, Override (+ reason), or Approve.

5. Reports Library

Purpose:
Browse cached SQLite reports; reopen and re-download text/PDF exports.
How to use:
Sidebar > Reports. Filter by modality/sync > Open report / download.

6. Cloud Sync

Purpose:
Simulated edge-to-cloud sync plus voice message library and session feedback (HelpYa).
How to use:
Sidebar > Cloud Sync. Sync when Network Mode = GSM Failover. Try voice templates / feedback form.

7. AI Lab (FYP Features hub)

Purpose:
One place for Explainable AI, guided demo, and LHW training arena.
How to use:
Sidebar > AI Lab. Launch demo, inspect XAI, or play Training Arena cases.

B. Surprise / Viva Features

8. Explainable AI (XAI)

Purpose:
Shows confidence, decision cascade, clinical factors, and coach tips (EN/Urdu) from live results.
How to use:
Run triage (or Launch FYP Demo). Open Dashboard XAI panel or AI Lab > live XAI.

9. One-click FYP Demo

Purpose:
Loads a Test Data scan, runs offline triage, arms XAI, queues a Hospital Hub alert - viva-ready fast.
How to use:
Sidebar Demo & system > Launch FYP Demo, OR AI Lab > Launch FYP Demo.

10. LHW Training Arena

Purpose:
Blinded risk-guess game vs AI truth with score/streak; builds clinical judgment for demos.
How to use:
AI Lab > Training Arena. Guess risk before reveal > check score/streak.

C. Sidebar Controls

11. Sectioned professional sidebar

Purpose:
Clean dashboard rail: Navigation, Triage, Network, Account, Demo - no duplicate nav.
How to use:
Use left sidebar sections; active page is the highlighted nav button.

12. PIN Auth + Role Switch (LHW / Doctor)

Purpose:
Role-based UI. Doctors can override assessment; LHW is restricted. Demo PINs: 1111 / 9999.
How to use:
Account & language > LHW or Doctor. Optional: enter PIN to authenticate.

13. Urdu / English toggle

Purpose:
UI strings switch via translation helper for bilingual demos.
How to use:
Account & language > EN or Urdu buttons.

14. Network Mode (Fully Offline / GSM Failover)

Purpose:
Controls whether network/sync path is allowed. Offline keeps edge-only inference.
How to use:
Network section > Fully Offline or GSM Failover. Sync button appears in GSM mode.

15. Detection Overlay

Purpose:
Draws bounding boxes on the triage image when available.
How to use:
Triage controls > checkbox Show Detection Overlay (after a run).

16. Privacy-hash DICOM ingest UX

Purpose:
Shows anonymized privacy hash during ingest for privacy storytelling in demos.
How to use:
Automatic on Run Triage / Demo; visible in Case Builder / dashboard metadata.

D. Supporting Features

17. Clinician assessment override

Purpose:
Allowed roles can adjust BI-RADS / TB severity for documented clinical review.
How to use:
On Dashboard after triage (Doctor role). Select override values and confirm.

18. Voice Message Library + HelpYa feedback

Purpose:
EN/Urdu/Punjabi templates + session rating form (TTS is text/demo; uploaded audio plays locally).
How to use:
Cloud Sync page > Voice library / Help & Feedback form.

E. Simulated vs Real

REAL: XAI from live result, FYP Demo + Training (offline triage), Reports SQLite cache, role/PIN gates, Urdu toggle, overlay, Hub Agree/Override (session), Case Builder session fields.

SIMULATED for demo: Cloud IoT sync, edge HW stats, full TTS speech, some Cloud quick-action toasts.

UNCHANGED: Core offline model inference fallbacks and YOLO pipeline logic.

F. Quick Viva Path (Recommended)

1) Start app -> Overview
2) Sidebar -> Launch FYP Demo (confirm)
3) Dashboard -> show triage + XAI panel
4) Hospital Hub -> queued alert -> Agree/Override
5) AI Lab -> Training Arena (one guess round)
6) Reports -> open cached report
7) Optional: switch Doctor/LHW + Urdu toggle
